SPIDER DOME

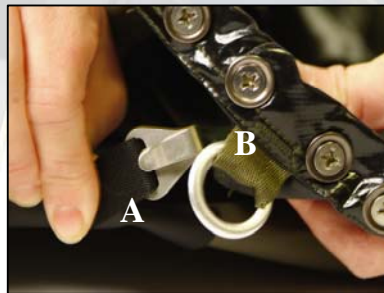

Instructions

Components:

- 1) Main Dome
- 2) Groundsheet
- 3) Stabilising Bars
- 4) Heavy Duty Pegs
- 5) Removable Front Door
- 6) Carry Bag

1) Make frame by connecting Spider Dome poles

2) Take groundsheet and attach clip (A) to main dome ring (B). Do this on both sides.

3) Once clipped this will hold the dome in place and then pull frame over groundsheet

4) Clip stabilising bars to external frame for stability and tension.

5) Peg down through diamond shaped pegging points and the groundsheet rings using the heavy duty pegs supplied. (The groundsheet is an internal version with an extra 3-4" which will stop the bugs and cold air getting into the dome).
